

Introducing the ROCKWOOL Safe 'n' Silent range

Now distributed by Fletcher Insulation

ROCKWOOL Safe 'n' Silent Pro is a range of high density stonewool insulation batts used for interior applications where advanced acoustic performance is required, along with the benefits of excellent fire and thermal performance.

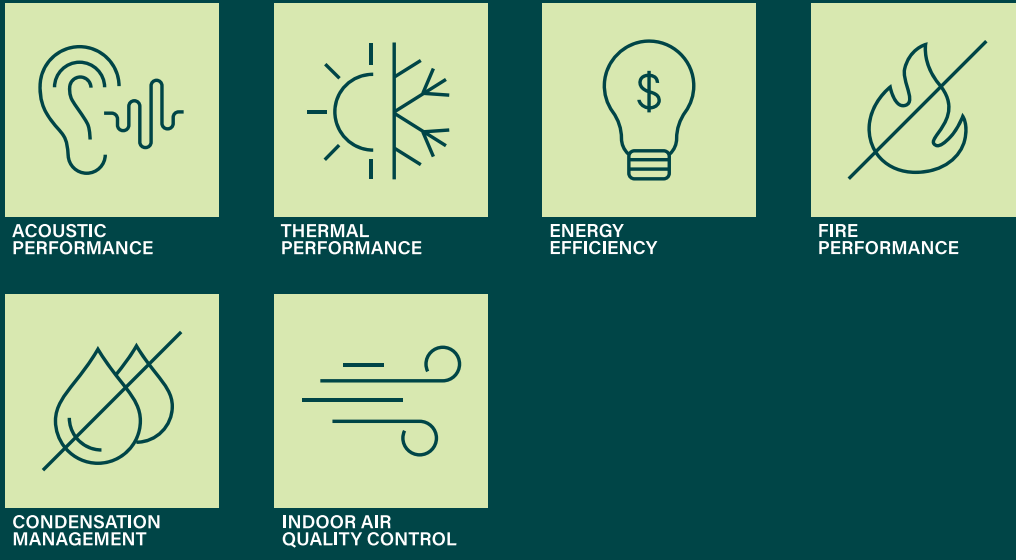

Noise pollution can have a significant impact on people's health and wellbeing, which is why high performing acoustic insulation in buildings such as apartments, townhouses, aged care facilities, hospitals, schools, offices, warehouses and entertainment venues is important.

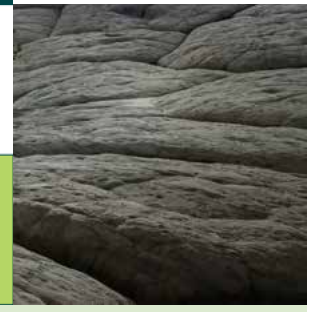

As an integral part of internal wall and ceiling systems, the ROCKWOOL Safe 'n' Silent Pro range improves privacy, minimises nuisance sounds from adjacent rooms, and in the case of residences helps reduce sleep disturbance from unwanted noise.

The ROCKWOOL Safe 'n' Silent Pro range of insulation batts are easy to friction fit into walls and ceilings, ensuring optimal acoustic performance. They are also non-combustible and when directly exposed to fire do not develop toxic smoke or promote the spread of flames.
